IDEATION PHASE (PHASE 1)

StaffSync HRMS — Defined Problem Statements

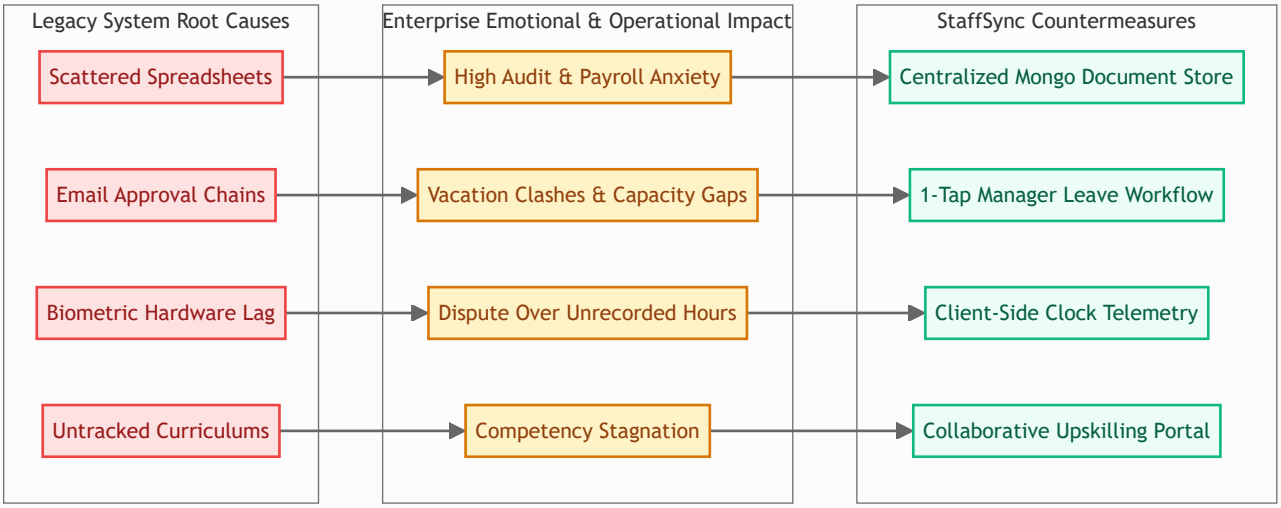

Comprehensive problem definitions across enterprise personas using the standard 5-part empathetic framework.

System	**StaffSync — Enterprise Human Resource Management System**
Target Stakeholders	HR Admin, Staff Employee, Line Manager, Chief Operating Officer
Status & Version	Approved & Baselined | Version: 1.0.0

1. Overview & Framework

To avoid building superficial features that fail in enterprise deployments, StaffSync establishes problem statements using the industry-standard empathetic format: *"I am [persona] / I am trying to [objective] / But [friction point] / Because [root cause] / Which makes me feel [emotional / operational impact]"*.

FIGURE 1: PROBLEM CAUSALITY & SOLUTION ENGINE ARCHITECTURE

2. Defined Enterprise Problem Statements

PS-1: Fragmented Employee Records & Manual Directory Auditing

I am:	An HR Operations Specialist managing 350+ multi-department employees.
I am trying to:	Maintain accurate employee contact details, role designations, and department rosters.
But:	Staff records are scattered across outdated Excel sheets, email attachments, and paper folders.
Because:	There is no centralized, cloud-synchronized employee directory with live search and role updates.
Which makes me feel:	Stressed, overwhelmed, and vulnerable to compliance audits and embarrassing miscommunications.

PS-2: Manual Leave Accounting, Double-Bookings & Balance Disputes

I am:	An enterprise employee planning necessary personal time off and vacation.
I am trying to:	Check my remaining annual leave balance and request time off without friction.
But:	My requests get lost in manager email threads, and I have no visibility into my current balance.
Because:	Leave calculation is done manually at month-end in private HR spreadsheets with no self-service portal.
Which makes me feel:	Anxious, frustrated, and untrusted by leadership when forced to constantly follow up.

PS-3: Inaccurate Attendance Telemetry & Shift Tracking Friction

I am: A hybrid staff employee working both remotely and in the regional branch office.

I am trying to: Log my daily arrival, departure, and active shift duration seamlessly.

But: Physical biometric scanners regularly fail or refuse to recognize fingerprints, and remote work lacks a punch-in mechanism.

Because: Attendance systems are tied to legacy hardware that cannot bridge modern hybrid work paradigms.

Which makes me feel: Demoralized and defensive when confronted about unrecorded hours I legitimately worked.

PS-4: Manager Resource Blindness & Leave Approval Bottlenecks

I am: An Engineering Team Lead responsible for sprint milestones and squad delivery.

I am trying to: Review leave requests and allocate sprint tasks without compromising project deadlines.

But: I cannot easily see who else is scheduled off on the requested dates without checking multiple calendars.

Because: Leave approval workflows are completely decoupled from team presence and capacity dashboards.

Which makes me feel: Paralyzed, resentful of administrative busywork, and fearful of missing delivery deadlines.

PS-5: Communication Noise, Bulletin Overload & Information Loss

I am: An HR Director needing to broadcast critical policy updates and company announcements.

I am trying to: Ensure all employees receive, read, and acknowledge essential operational announcements.

But: Staff miss announcements buried in all-hands email blasts or cluttered Slack chat channels.

Because: The organization lacks a dedicated, prioritized, and persistent broadcast bulletin within daily tools.

Which makes me feel: Helpless and exhausted from repeatedly chasing teams on policy acknowledgments.

PS-6: Untracked Skill Development & Training Disconnect

I am: A Chief Operating Officer striving to upskill staff and maintain technical compliance.

I am trying to: Assign, track, and verify employee completion of mandatory compliance and technical curriculums.

But: Training progress is unmonitored, ad-hoc, and completely disconnected from employee performance profiles.

Because: Dedicated learning management systems (LMS) are too expensive and disconnected from the daily HR system.

Which makes me feel: Concerned regarding enterprise technical readiness, audit risks, and organizational stagnation.
